

Release December 2025

SUMMARY

Key Features & Improvements:	
Main Web Application – Key features and improvements	Ref.
Room, Site and Asset bookings	271
Forms – Conditional Display Questions	2768
Assets – Asset Templates	2836
Spaces – Can set infinite hierarchy to your sites, locations and assets	2320
App – Key features and improvements	Ref.
Stock Management in mobile app with QR codes	2443

Other Improvements:	Ref.
Main Web Application – Other improvements	
Set Regional Manager for each region	2966
Asset changes history – site, location and sublocation changes	1136
Planned Schedule grid – takes into account user’s site access	3477
Take user straight into form after job creation	3498
Set the featured image for sites, locations and sub-locations	2798
New Job and new request. Reported By field - not mandatory or prepopulating	2362
New Request – can upload document upload on new request screen	2481
Purchase Order access - restrict based on user's site access	1373
Job requests - Show asset(s) attached to request of list and details page	2999
Contractor Quote Page – Show Quote Documents button on main screen	3421
Job type groups enabled to work for remote requests	3541
Form Designer - Custom Header - More Tags	3012
Job Grid – new Warranty filter and Warranty columns added to grid	3423
App – Other improvements	Ref.
App – Job Details – shows summary of attached items with icons	2719
App - Request authorisations now possible on app	2796
App - 'Reported by' added to Manager Module	2941

Versions:

Main Web Application v23.15.0

Mobile App v3.2.0

Release timetable

Date and Time of Release	Which Servers
22/12/2025 From 6pm (GMT)	app2.mytrackplanfm.cloud a***k.mytrackplanfm.cloud app4.mytrackplanfm.cloud app.mytrackplanfm.cloud s***y.mytrackplanfm.cloud app3.mytrackplanfm.cloud mydimomaintfm.cloud h***b.mydimomaintfm.cloud

Coming Soon in Future Releases:	When
Stock: Free text search on app, stock requests from mobile app, prevent movements if below reorder level, unit of measurement as dropdown, manufacturer reference	2026
Contractors and technicians – GPS breadcrumbs, find closest resource	2026
Health and Safety – Hazards: asbestos, radiation, confined spaces	2026
Planned Schedule – can randomise the assets attached to each job	2026
Notification manager – for users to set messages to appear for other users	2026
Planned Maintenance - user and contractor can set dates and times for future planned maintenance schedules by sites and assets	2026
Whats App conversations	2026
Power BI for reports with SQL Views	2026
AI – Image recognition for stock, assets, sites	2026
AI – Predictive Maintenance - Asset alerts when number of reactive jobs over threshold	2026
AI – Recommend contractors and engineers based on their last known location and the job’s type and site.	2026

Key Features and Improvements - Details

Room, Site and Asset bookings

Why is it useful?

Allow users to reserve / book any of your site, location, assets or even car park spaces

Details:

First enable booking in Settings -> Bookings. Then set up booking categories such as “Meeting Rooms”, “Car Park Spaces”. You can then configure each booking category and decide which site, locations, assets or spaces (new) can be reserved.

A user can then book a specific object, or goto the booking categories page to reserve a meeting room or car park space.

For each user you can control which booking categories they can book / reserve.

You can also design a set of questions you want to ask the user upon their booking / reservation.

Forms – Conditional Display Questions

Why is it useful?

You can now make form questions only show dependent on the answers to another question.

Details:

In the form designer > Questions tab, you will see a new column “Display Conditional On”. For each question you can set when to show or hide the question dependent on the value in another question.

Works beautifully in the main application and also in the mobile app.

You can set a nested set of conditional display questions. For example, question A only shows when question B is ..., question B only shows where question C is

Assets – Asset Templates

Why is it useful?

If you have many assets of a similar type or model with similar properties, then this will speed things up for you.

Details:

Define one or more asset templates with most of the usual asset fields that are available on the asset page.

Then when you create or edit an asset you can set which asset template it belongs to and then inherit all the properties from the asset template.

Spaces – Can set infinite hierarchy to your sites, locations and assets

Why is it useful?

This can have many uses. For example:

- Set up car park spaces for booking and reservations
- Define additional levels to your buildings, to go beyond the hierarchy of site > Location > Sublocation
- Bring in jobs from other software systems using our API and do not worry about mapping the sites, locations and sublocations to the other system.

Its simple and basic at the moment. More is likely to come subject to demand from clients and prospects.

Details:

Goto Settings -> Spaces to turn it on. Here you can also set Space categories, for example "Car Park spaces"

Then goto Sites > Spaces to start creating space.

Each space can be attached to a site, location, sublocation or asset. A space can also be defined as "stand alone" – for example a car parking space.

A space can also be attached to another space and that space can be attached to another space. So offering an infinite hierarchy.
